

SAVe: Spam & Virus Email Management

Giving your business the power to fly.

Email is critical to business today.
You probably do more business by
email than by phone.

Do you know that over 90% of all email is junk mail? The moment your email system receives junk mail, it increases demands on your servers and employees.

Pre-Processing Makes Email Better

The SAvE solution preprocesses messages before they reach your servers, which means incoming email messages are processed in real time. The fully scalable and extensible platform allows for

the industry's best email services without extra upfront investments or related ongoing maintenance costs.

Stop Offensive Spam

With SAvE (Spam And Virus email) protection from Clever Ducks, your resources and end users are protected. Suspected junk messages and viruses are stopped before they reach the email system.

Never a Lost Email Message

With SAvE, suspicious messages are not bounced or deleted. They are quarantined in a secure web-based message center.

“Clever Ducks eliminated the spam problem for our office. We used to spend hours trying to figure out what to do about spam. Now we do other things.”

Jeff Buckingham
